

CID [🔒]secureLogKeeper

The legal guarantee of business transactions

With the shifting of business processes to the online world, it is crucial to generate secured audit trails that ensure a traceability admissible as Digital Evidence in a legal process, providing support to the business and applicable regulatory compliance.

“ *A complete tool to protect audit traces and logs, easily integratable, generating digital evidence* ”

Easy integration and safe

- Based on web-services (SOA ready) and Message Queues.
- Access using digital certificates.

Securing of evidences

- Timestamp the traces, ensuring their notarization.
- System of integrity using linked hashes.

Viewing traces

- Web console for administrators and audit console for auditors, with strong authentication mechanism using digital certificates.

CID SecureLogKeeper allows the secured storage of audit traces, logs and tracks of the business processes of your company; creating, storing and validating digital guarantors proofs of the actions carried out in the involved Information Systems.

Protection of the Audit Traces.

Each trace is stored in a secured manner, with controls of integrity and confidentiality, guaranteeing in this way the Custody Chain of digital evidence.

Visualization of the Audit Traces.

Auditors and administrators can perform search criteria of the logs that are accessible in a console accessible securely via the web.

Validation of the Audit Traces.

Provision of a system that verifies the integrity and confidentiality of the traces.

Trusted Third Party

"One cannot be at the same time judge and jury."

Hosting the service in WIS@key's highly secured Bunker (SFB), WIS@key acts as a Trusted Third Party, providing legal security, reliability and proof of digital evidence.

CID SecureLogKeeper can be purchased and deployed in several ways:

- WIS@key acting as the Trusted Third Party, subscribing to a service managed from WIS@key's highly secured Bunker (SFB) in a
 - SaaS model, or
 - in a transactional model,
- Licensing software for in-house deployment at the customer premises.

Value Added Solutions

- **Regulatory and legal compliance:** this is a perfect tool for passing audits and ensuring traceability required by local and international laws such as:
 - LOPD, LISI, Law 34/2002
 - AAPP: LAESCP
 - Financial: Law 22/2007, Directive 2007/64/CE, MiFID, BASEL II.
 - Health: HIPPA

Legal Support for the business processes: the information systems that support business processes will be able to generate audit traces and enhance users' trust and give legal support to:

- Services Provision (SLAs)
- Recruitment Systems
- Online banking
- Shopping platforms, online stores.
- ...

- **The perfect addition to your SIM tool:** systems dedicated to centralize logs and event management systems will be able to generate digital evidence, allowing legal recognition in case of litigation and ensuring the Chain of Custody.
